

Menu's, Sections, Items & Subitems

The menu functionality is very loose and flexible. The different types (Menu, Section, Item and Subitem) can be whatever you want. Below are some vague examples of what they will probably be, based off of how the menu currently looks.

Menu – Standard, Desserts, Sunday, An Event Menu

Section – Grazing, Starters, Mains, Coffee, Sides

Item

Items get slightly more complicated. An item can be one of 3 things:

1. A **FOOD** item like Olives, Spaghetti Carbonara or Filter Coffee
2. A **SUBTITLE** item like Pasta, From the Sea or Burgers.
3. A **NOTE** item like *'All of our grills are served with sauteed mushrooms, pan friend tomato, beer battered onion rings and Trellech tatties or sweet potato chips.'*

Subitem

Subitems *can* be applied to all **FOOD** items but are mainly used for extra's for sides.

For example, 'Cheese' and 'Cajun Spice' for chips and tatties, etc.
